

NETFLIX DATASET – EXPLORATORY DATA ANALYSIS REPORT

Internship Task 3

Dataset: Netflix Dataset

Submitted By: Aksh Daraniya

Company: Synent Technology

1. Introduction

This report presents the work completed as part of Internship Task 3: Exploratory Data Analysis (EDA). The objective was to explore the Netflix dataset, identify patterns, analyze trends, and generate meaningful insights using statistical and visual analysis.

2. Task Details

Task Name: Exploratory Data Analysis (EDA)

Objective: Identify trends and patterns.

Required Analysis: Summary Statistics, Correlation Analysis, and Trend Identification.

Expected Output: Insights supported with graphs.

3. Dataset Overview

The Netflix dataset contains information about movies and TV shows available on Netflix. The dataset consists of 8807 records and includes attributes such as title, type, country, rating, release year, and duration.

4. Data Preparation

The dataset was inspected for missing values and inconsistencies. Categorical fields were standardized, release year information was reviewed, and records were prepared for exploratory analysis and visualization.

5. Summary Statistics Analysis

The dataset contains 6131 movies and 2676 TV shows. Release years range from 1925 to 2021, indicating a diverse catalog spanning multiple decades.

6. Correlation Analysis

The dataset is primarily categorical in nature. Therefore, traditional numerical correlation analysis is limited. Trend-based relationships between release years, content types, and ratings were analyzed instead.

7. Trend Identification

Analysis revealed a strong increase in Netflix content in recent years. Movies significantly outnumber TV shows, and mature audience ratings are among the most common categories on the platform.

8. Visualizations

Figure 1: Movies vs TV Shows Distribution

Figure 2: Release Year Trend

Figure 3: Content Rating Distribution

9. Key Insights

- Movies form the majority of Netflix content.
- Netflix has significantly expanded its catalog in recent years.
- Most content targets teenage and adult audiences.
- The platform focuses heavily on modern releases.
- Data visualization helps uncover content distribution patterns.

10. Conclusion

This project successfully achieved the objective of identifying trends and patterns within the Netflix dataset. Through summary statistics, trend analysis, and visual exploration, valuable insights were generated regarding content distribution, ratings, and release patterns. The analysis strengthened practical skills in data exploration, visualization, and interpretation using Python.
